**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2, 6, 9-11 and 18-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sundet (5,665,446) in view of Futhey (5,840,407).

Sundet relates to a decorating assembly comprising a laminate that is transparent and comprises a cover sheet with a layer of pressure sensitive adhesive (PSA) on one surface thereof. Both the cover sheet and the PSA layer are vented or perforated and a release liner is provided for the adhesive (abstract and figure-2). However, Sundet fails to teach the presence of pieces of optical film with adhesive in the kit assembly. Futhey discloses an assembly comprising pieces of optical film provided with adhesive on one surface thereof and covered with a release liner (abstract and col. 4, lines 1-3). Futhey teaches the advantage of using optical film with adhesive to form simulated decoration. Therefore, it would have been obvious to one having ordinary skill in the art to utilize Futhey's teaching to provide optical film pieces with adhesive in the invention of Sundet with the motivation that it would provide for a kit which includes the optical film for decorative purposes.

As for claims 18 and 19, the process steps are not germane to the issue of patentability of the product itself and hence, have not been given patentable weight.

Art Unit: 1772

As for process claims 1-2, 6 and 9-11 , the Sundet reference teaches the steps of providing a kit , placing the optical film pieces on a common plane, adhering the pieces onto the laminate cover, placing the formed composite onto a substrate, pressing the air out from between the substrate and removing the laminate cover (col. 2, line 8 to col. 3, line 15). However, Sundet fails to teach the presence of the optical film as the pieces. Futhey, as discussed above, teaches the advantage of providing optical film for decorative purpose. Therefore, it would have been obvious to one having ordinary skill in the art to utilize Futhey's teaching of providing the optical film pieces in the invention of Sundet with the motivation to provide for a kit for decorating a substrate.

3. Claims 3-5, 7-8, 12-17 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sundet in view of Futhey and McNaul (5,225,260).

Sundet and Futhey, as discussed above, fails to teach that the kit comprises a predetermined printed design. McNaul teaches a laminate comprising an application tape (24) having printed design (50) on one of the surface thereof. McNaul teaches the advantage of the presence of the print that provides for alignment of the sign components. Therefore, it would have been obvious to one having ordinary skill in the art to utilize McNaul's teaching of providing grid lines as preprinted design in the invention of Sundet with the motivation to provide for alignment guidance of the pieces laminated thereon.
